

# PowerSteered series

✔ Powerful load moving up to 154,000 lbs.

PowerSteered electric tuggers allow a single operator to move loads weighing up to 154,000 lbs. with total control and precision. By stepping away from the load to operate remotely, your team can maximize visibility to maneuver in complex environments without risking staff or load safety.

Built for demanding industrial applications, PowerSteered tuggers combine robust coupling technology with a small machine footprint, providing the performance of much larger equipment in tight or challenging spaces.

# The faster, smarter alternative

Growth requires faster, smarter movement of large equipment - so when demand peaks, don't let your material handling equipment hold you back.

Trying to shunt large, heavy loads through tight production areas using forklift trucks stalls throughput and increases risk of injury or damage to high-value components.

Switching to PowerSteered electric tuggers eliminates waiting time for forklifts and reduces handling steps between production stages, taking on the movement of heavy loads up to 660,000 lbs. in industrial environments by using MultiLink for even more weight-moving power.

By minimizing risk to operator safety and load damage, PowerSteered tuggers also boost flexibility with no license needed and intuitive operator controls for precision maneuvering.

## Traditional material handling systems

Before

- ⊗ Waiting for lifting equipment between stages
- ⊗ Shunting & pulsing loads to inch into position
- ⊗ Wide turns & poor positioning in tight bays
- ⊗ Large footprint and restricted sightlines
- ⊗ Throughput depends on forklift availability
- ⊗ Lifting loads off the ground = increased risk of damage

## PowerSteered movement

After

- ✔ Continuous flow between build stages, no waiting
- ✔ Remote control for maximum precision & visibility
- ✔ Omni-directional movement in confined spaces
- ✔ Smooth, controlled moves to protect equipment
- ✔ Move up to 154,000 lbs. with a single machine
- ✔ Move up to 300,000kg with multiple machines for even more power

# Benefits of the PowerSteered series

## Small footprint, maximum power

The PowerSteered range moves the heaviest, largest loads up to 154,000 lbs. with a single machine. Powerful hydraulics hold loads securely, even on slopes, while the machine's small footprint maximizes maneuverability in tight spaces.

## Safety as standard

Remote control lets the operator move to the ideal vantage point away from the load to gain full visibility. Every machine includes a warning horn, speed control, emergency stop, automatic braking, and flashing safety light.

## Scalable fleets

MultiLink technology allows multiple PowerSteered tuggers to work together as a team under the control of a single operator to combine weight-moving capacity up to 660,000 lbs. and take on even heavier loads.

- ✓ Move up to 154,000 lbs. with one machine and even more using MultiLink
- ✓ No operator license required
- ✓ Zero emissions
- ✓ Advanced control options
- ✓ Total load visibility
- ✓ Effortless power steering
- ✓ Unmatched maneuverability
- ✓ More flexible than traditional MHE

## Typical applications

### Aerospace & defence

Precisely position large, high-value fuselage sections, structural assemblies, wings, military aircraft or submarines.

### Construction, mining & agriculture

Easily move large fabricated components and sub-assemblies between production cells without the need for cranes or forklifts.

### Wind energy

Transport and position high-value, delicate turbine blades without the risk of flexing or twisting during movement.

# Key features

## Built for industry

With an all-steel chassis that has been durability tested, the PowerSteered series is designed to handle the toughest load-moving challenges.

## Safety as standard

Every machine includes an emergency stop, anti-crush button, warning horn, flashing safety light, and two-speed selector switch.

## Secure hydraulic coupling systems

Our heavy-duty coupling system ensures a secure connection to the load, while self-levelling hydraulics maintain connection with the load on uneven ground and slopes.

## Interchangeable batteries

Easy-swap batteries to maximize uptime across multi-shift environments with an optional Battery Protection System for longevity.

## Remote control

By controlling PowerSteered tuggers via a remote control, your team can position themselves for maximum visibility to reduce the risk of collisions and damage during complex moves.

# Advanced technology options

## Move even more & scale your operations

### MultiLink

Combine the power of multiple PowerSteered tuggers for even more weight-moving capacity up to 660,000 lbs. to move the impossible with a single remote control.

Using our innovative MultiLink technology, PowerSteered tuggers work together as one system so that the load is always protected; **no twisting, no flexing, no shunting - just precision movement.**

### TillerLink

Synchronize two pedestrian-operated PowerSteered tuggers to double the weight-moving power and maximize load stability

The machines work in unison to give one operator total control of challenging loads without compromising on precision or safety.

### Automation

Create repeatable, precise routes with line follow technology for efficient and accurate load movement that can be relied on day in, day out.

### MasterConnect data platform

Turn operations into actionable insight with fleet-wide visibility, access control, and real-time usage analytics of your PowerSteered tuggers for smarter decision-making and proactive maintenance of machines.

## Customer success stories

### Terex replaced forklifts in busy production facility with PS3000+

Moving 40,000 lbs. rock crushing chambers and chassis.

Eliminated diesel forklifts from internal manufacturing areas.

Remote controlled tuggers for maximum visibility and safety moving large loads.

### 300% efficiency increase for Sunbelt Rentals with PS800+ LH

Forklift time reduced by half across multiple depots.

Manpower reduced by 75% per move to boost efficiency.

Safety-first approach delivers compounding productivity gains.

## PowerSteered models

PS800+  
Moves up to 17,000 lbs.

PS2000+  
Moves up to 44,000 lbs.

PS800+ LH  
Moves up to 17,600 lbs.

PS2500+  
Moves up to 55,000 lbs.

PS1000+  
Moves up to 22,000 lbs.

PS3000+  
Moves up to 66,000 lbs.

PS1200+  
Moves up to 26,400 lbs.

PS7000+  
Moves up to 154,000 lbs.

PS1500+  
Moves up to 33,000 lbs.

MultiLink  
Combine machines to  
move up to 660,000 lbs.

### Book a consultation today

See how the **PowerSteered**  
series can transform your  
load moving processes and  
boost operational efficiency.
